Subject: Broadband Opportunity Council Notice and Request for Comment

I believe a parent must be part of the council. The Internet must be free. We should not be regulated to a price. When the council make a decision about how to regulate the internet it will include an exorbitant price limiting usage of the internet/broadband. In addition who are the independent agencies are encouraged to strongly comply? How are the public agencies listed independent? Independent of what? Translation the independent agencies they do not have to comply. The councils decision is going to be a unimplemented decision what is the sense of forming a council wasting paper work time energy on a proposal not implemented by executive order or law? **Expanding Broadband Deployment and Adoption by Addressing Regulatory Barriers and Encouraging Investment and Training through** Establishing the Broadband Opportunity Council is not necessary because it cannot be implemented.
