### Summary

- CSMAC recommendations assessed to identify NTIA actions
- Many related actions already initiated or part of on-going NTIA activities
- New discrete actions highlighted today
- All recommendations and NTIA actions will be published on NTIA CSMAC website

### Spectrum Mgt via Databases

In response to the recommendations developed by the Spectrum Management via Databases subcommittee and approved by the CSMAC:

- NTIA will assess applicability of web-based coordination to other bands and systems similar to the 70/80/90 GHz coordination portal, which permits public coordination without access to classified or sensitive data. (Q3FY16)
- NTIA will coordinate with and request the Wireless Spectrum R&D Senior Steering Group to develop a priority list of research topics such as advanced sharing technologies and techniques to include database approaches. (Q2FY16)

### Spectrum Mgt via Databases

In response to the recommendations developed by the Spectrum Management via Databases subcommittee and approved by the CSMAC:

- NTIA will assess the need for a federal Spectrum Access System (SAS) and associated requirements. (Q4FY16)
- NTIA will study how a federal SAS might be implemented and an associated roadmap. (Q4FY17)
- NTIA will support the White House Spectrum Policy Team to, consistent with applicable law, assess and implement policies for sharing of classified, sensitive, or proprietary data [with authorized parties] regarding assignments, utilization of spectrum, system configurations, business plans, and other information.

### **Bi-Directional Sharing**

In response to the recommendations developed by the Bi-Directional Sharing subcommittee and approved by the CSMAC:

- NTIA (and the IRAC) will review the NTIA Manual to clarify scope of current authorities to allow federal users secondary (or coprimary) access to non-federal spectrum. (Q1FY16)
- NTIA will identify regulatory changes (and file a rulemaking petition with the FCC if necessary) to enable co-equal use rights for Federal users sharing non-Federal. (Q3FY16)

# Government and Industry Collaboration

In response to the recommendations developed by the Government and Industry Collaboration subcommittee and approved by the CSMAC:

- NTIA will leverage the PPSG SWG to identify, assess and prioritize topics for increased government/industry collaboration. (Q2FY16)
- NTIA will develop a detailed government/industry collaboration implementation plan, and initiate execution, based on the current framework endorsed by the CSMAC. (Q3FY16)

### **Measurement and Quantification**

In response to the recommendations developed by the Measurement and Quantification subcommittee and approved by the CSMAC:

- NTIA will perform measurement applicability analysis on the 1300-1390 MHz band. (Q4FY16)
- NTIA will perform initial spectrum occupancy measurements in the 1300-1390 MHz band in a geographic area determined from the measurement applicability analysis. (Q3FY17)
- NTIA will document the Quantitative Assessment effort, including data collection and verification requirements, and methodology to analytically quantify spectrum usage in terms of frequency (bandwidth), geography and time. (Q4FY16)

#### **Enforcement**

In response to the recommendations developed by the Enforcement subcommittee and approved by the CSMAC:

• NTIA will study potential mechanisms for effective enforcement based on a case study of the Terminal Doppler Weather Radar interference from unlicensed devices. Mechanisms will include (but are not limited to): 1) defining harmful interference; 2) unique identification and classification of signals; 3) spectrum monitoring; 4) improving equipment certification processes; and 5) transparency and sharing of interference data. (Q4FY16/Q1FY17)

### **Spectrum Sharing Cost Recovery**

In response to the recommendations developed by the Spectrum Sharing Cost Recovery subcommittee and approved by the CSMAC:

• Deferred pending ongoing discussions

## **Way Forward**

- All recommendations and NTIA responses will be published on NTIA CSMAC website
- NTIA actions will be summarized to include completed, ongoing and new
- NTIA actions subject to change based on resources available and evolving priorities
