Veterans Border Solutions A Potential \$3 Million Success

By Virgil Mathis

Photo of a prototype tower: Veterans Challenger Border Patrol Homeland Security Device Invented in Chicago

The Department of Homeland Security has a goal to hire about 4000 veterans into the department by the year 2012. Visit www.dhs.gov/veterans

The Veterans Challenger Borders and Ports Homeland Security Project is a superior high-tech fail safe system designed to create hundreds of jobs for veterans to catch potential radical terrorist, drug, and human traffickers with cameras, vibration sensors, and with other classified business methods of the military order.

On the 4,000 miles of the Canada border and the 1,969 mile area of the Mexican border, the Veterans Digital Assistive Technology Solutions is available for rapid development to allow Veteran Defenders of America to serve and protect the entire United States with super reliable high-tech devices and special services using the labor of veterans from across the country who previously given the oath to defend our country during military service.

The Department of Homeland Security should consider the Veterans Challenger Borders and Ports High-Tech Solutions of Service for America over the \$1 billion failure of the project previously granted to the Boeing Corporation. A new comprehensive high-quality service method and solution now incorporates new ways for amputees and other disabled veterans to be highly effective to get the job of security on our borders done better with remote digital guard duty innovative technologies for the government.

The Government Accountability Office, the Department of Homeland Security, the Department of Veterans Affairs, and the Department of Labor can blame success for the Veterans Challenger Homeland Security Project start-up with the Illinois Institute of Technology at the Tech Advantage Program at <http://techadvantage.iit.edu>.

The Veterans Challenger Homeland Security Project for effective ways to secure United States borders and ports could be a part of President Barack Obama's border security plan with the creation of Special Forces, and new jobs for many more veterans to secure the entire United States of America.
